

PB Group Limited

SUSTAINABILITY POLICY

PB Group is committed to adopting a responsible attitude to protecting the environment by developing innovative and sustainable solutions.

Some of our objectives are:

Specifying products which are durable, economic and do not require significant amounts of energy to produce.

Considering and suggesting, wherever possible, the use of recycled materials e.g. recycled paper. Where this is not possible, ensure that paper used has been awarded the Nordic Swan Environmental Standard.

Local sourcing of energy and staff to reduce energy consumption.

Reducing the volume of chemicals used and, where recycling is unavoidable, ensuring that they are disposed of in a responsible and cost-efficient manner.

Working in partnership with suppliers and customers to develop effective and meaningful methods of working.

Adopting measures to prevent pollution and adverse impact on the environment and the local community.

Training staff and suppliers to enhance awareness of environmental legislation, regulations and Good Practice.

Minimising waste and maximising re-use and recycling wherever possible e.g. re-use of printer cartridges, recycling paper and cardboard.

Adopting energy efficient plant and materials.

Balancing economic viability with environmental and social responsibility to provide lifetime solutions.

Developing a management system to demonstrate continual improvements in environmental and health & safety performance.
